    The ArticleGroupManager class manages all operations related to ArticleGroups.

ArticleGroupManager() - Constructor for class application.ArticleGroupManager
    Constructs a new ArticleGroupManager with an empty collection of groups.

C

clearAllGroups() - Method in class application.ArticleGroupManager
    Clears all article groups from the system.

clearArticles() - Method in class obj.ArticleGroup
    Clears all articles from this group.

containsArticle(long) - Method in class obj.ArticleGroup
    Checks if this group contains a specific article.

createGroup(String, String) - Method in class application.ArticleGroupManager
    Creates a new article group with the specified name and description.

D

deleteGroup(int) - Method in class application.ArticleGroupManager
    Deletes an article group by its ID.

E

equals(Object) - Method in class obj.ArticleGroup
    Checks if this ArticleGroup is equal to another object.

G

getAllGroups() - Method in class application.ArticleGroupManager
    Retrieves all article groups.

getArticleCount() - Method in class obj.ArticleGroup
> Gets the number of articles in this group.

getArticleIds() - Method in class obj.ArticleGroup
> Gets the list of article IDs in this group.

getDescription() - Method in class obj.ArticleGroup
> Gets the description of this article group.

getGroup(int) - Method in class application.ArticleGroupManager
> Retrieves an article group by its ID.

getGroupCount() - Method in class application.ArticleGroupManager
> Gets the total number of article groups in the system.

getGroupId() - Method in class obj.ArticleGroup
> Gets the unique identifier of this group.

getGroupName() - Method in class obj.ArticleGroup
> Gets the name of this article group.

getGroupsContainingArticle(long) - Method in class application.ArticleGroupManager
> Gets all groups that contain a specific article.

getStatistics() - Method in class application.ArticleGroupManager
> Gets statistics about the article groups in the system.

groupContainsArticle(int, long) - Method in class application.ArticleGroupManager
> Checks if a group contains a specific article.

groupExists(int) - Method in class application.ArticleGroupManager
> Checks if a group exists with the specified ID.

H

hashCode() - Method in class obj.ArticleGroup
> Returns a hash code for this ArticleGroup.

O

obj - package obj

R

removeArticle(long) - Method in class obj.ArticleGroup
> Removes an article from this group.

removeArticleFromGroup(int, long) - Method in class application.ArticleGroupManager
> Removes an article from a specific group.

S

searchGroupsByName(String) - Method in class application.ArticleGroupManager
> Searches for article groups by name (case-insensitive partial match).

setDescription(String) - Method in class obj.ArticleGroup
> Sets the description of this article group.

setGroupName(String) - Method in class obj.ArticleGroup
> Sets the name of this article group.

T

toString() - Method in class obj.ArticleGroup
> Returns a string representation of this ArticleGroup.

U

updateGroup(int, String, String) - Method in class application.ArticleGroupManager
> Updates both the name and description of an existing article group.

updateGroupDescription(int, String) - Method in class application.ArticleGroupManager
> Updates the description of an existing article group.

updateGroupName(int, String) - Method in class application.ArticleGroupManager
> Updates the name of an existing article group.
